
BCIS 4620 Homework #5

Instructions: Answer each of the questions by running a SQL query in SPUFI using the DB we created in the DDL lab.

You may want to change the name of your output files to HWQ1, HWQ2,...and so on so you have a backup in case something goes wrong.

For each question, include a screenshot of your output showing the query that you ran and the result.

Copy each screenshot into a word document and then save as a PDF file.

Turn in the PDF file with all of your answers to Canvas by the due date listed in Canvas.

Questions

1. List the actors' name and birth date that begin with the letter "R". Sort the output in ascending alphabetical order.
2. List the oldest actor and their YOB. (Hint: Your query should only return 1 result.)
3. Average the actors' YOB.
4. List the movie names released between 2012 and 2015.
5. List the movie names' and release years, but have the column headers read " Movie Title" and "Release" respectively.
6. List all of the roles for actor "Chris Evans".
7. List the actor name and the number of "Uncredited" roles each played. (Hint, your output should have a name and a number)
8. List all of the actor names' and the number of "Uncredited" roles each played regardless if they have played an uncredited role or not.
9. List all of the movies and the number of roles played in each.
10. Provide a listing of the actors' names and the years that their movie was released. Sort the list by YOR in descending order.
